1. Product Overview

FAQ

1. What is ANC?

ANC stands for “active noise cancellation” - this feature is designed to eliminate ambient noise in your environment allowing you to enjoy your music without distraction while working, traveling or simply relaxing. It is most effective at reducing LOW frequency noises such as those from an airplane engine or a large crowd (frequencies from 20HZ-800HZ).

2. Why do I still hear certain noises with ANC on?

The ANC feature is best at reducing constant/steady LOW frequency sounds. Sudden, irregular noises such as shouting or car horns are not as effectively canceled out.

3. Can I still use my headphones if the battery has run out?

Yes, even when the battery has no more charge, the Avantree ANC031 can be used as a normal wired headphone.

Note: The buttons on the headphones will not work at this connection.

4. How to active/ shut down the “microphone mute” function?

When the headphones are in the calling status please long press the “—” button for 3s to active/ shut down the “microphone mute” function
